2nd Floor: Valley Orthopedic Associates
3rd Floor: Covington Diagnostic Imaging Services
SouthLake Clinic
Valley Medical Center Rheumatology

Magnetic Resonance Imaging (MRI) Equipment:

New GE Signa EXCITE 1.5T MRI

Weight: 13,900 lbs.

Installation: Through the roof with a crane!

Covington Diagnostic Imaging Services will be using GE medical systems – a market leader in 1.5T Magnetic Resonance Imaging (MRI) equipment. The GE Signa EXCITE 1.5T MRI system delivers the most comprehensive applications in the industry, supporting high productivity in all aspects of workflow. True parallel processing and ultrafast reconstruction, this system is used for assessment of anatomy, morphology, physiology, and function.

The GE Signa EXCITE MRI system is a short bore, high performance, whole-body imaging system providing comfort to patients with its wide open bore, lighting and ventilation. Contributing to the weight of this 13,900 pound machine is its patient-friendly dockable table. This table offers dual side controls for efficiency and safety – allowing for the table to be pulled out and patient removed from magnetic field in an emergent situation.
